

Starlink Offshore & Maritime

Satellite Internet Integration Guide for OSVs, FPSOs & Offshore Platforms

www.datagram.ng · +234 906 097 6424 · info@datagram.ng

1 Recommended Hardware — Starlink Flat High Performance

SPECIFICATION	DETAIL
Dish Type	Flat High Performance (Phased Array)
Operating Temperature	-30°C to +50°C
Wind Resistance	Operational up to 96 km/h (60 mph)
IP Rating	IP56 (dust and water resistant)
Power Draw	75–100W typical, 150W peak
Input Voltage	100–240V AC, 50/60Hz
Latency	20–40ms typical (low earth orbit)
Download Speed	100–500 Mbps (varies by conditions)
Cable Length (standard)	23m (extendable with approved cable)
Mounting	Integrated tilt motor — no manual adjustment required

2 DataGram Offshore Installation Process

- 1

Remote site assessment — sky view, power source, obstruction check
- 2

Site survey and PTW coordination with vessel/platform safety officer
- 3

Mount installation — pipe mount, deck mount, or bulkhead bracket
- 4

Cable routing through weatherproof conduit or gland fittings
- 5

Router placement and VLAN/network configuration
- 6

Live speed test and latency verification on site
- 7

Post-installation report issued to client (speeds, latency, config)

3 Supported Network Configurations

- Standalone Starlink network (crew Wi-Fi + operations LAN separated via VLAN)

- BYOD (Bring Your Own Device) router bypass via Starlink ethernet adapter
- Multi-WAN failover: Starlink primary + 4G/VSAT backup (Peplink/ MikroTik compatible)

- Remote monitoring and management via Starlink app or SNMP integration
- ## 4 Operational Coverage
- DataGram mobilises to offshore and coastal installations across:
- Rivers State (Port Harcourt)

Delta State (Warri, Asaba)

Bayelsa State (Yenagoa)

Akwa Ibom State

Lagos (offshore and lagoon)

Gulf of Guinea offshore coordinates on request
- ## 5 Request a Site Survey
- Contact DataGram to arrange a no-obligation pre-installation site assessment for your vessel or platform.
